

Groundwork Co-ordination and Verification - 2026/09/09

07:43 EDT - Transcript

Attendees

Favour Nwachukwu, Philip n. Tete, Vanessa Gwanvoma

Transcript

Vanessa Gwanvoma: Favor. Good afternoon.

Favour Nwachukwu: Good afternoon, Vanessa. Yes,...

Vanessa Gwanvoma: I see you're feeling stronger than yesterday.

Favour Nwachukwu: all I am actually.

Vanessa Gwanvoma: More strength.

Favour Nwachukwu: Thank you.

Vanessa Gwanvoma: I'm currently on transit. I hope that I'm at the airport. So our long meeting of today this is God that knows

Favour Nwachukwu: I pray Philillips gives us maybe because you're in transit he will now say okay let's try because I'm not fully ready I had little time to prepare so I just got myself back yesterday having to come up with the answers to the questions for the OKR trying to finish up better testers feedback implementation cutting through ground works in preparing for this meeting.

Vanessa Gwanvoma: Yeah. really a lot.

Favour Nwachukwu: It's a lot. Really? how many minutes is your flight?

Vanessa Gwanvoma: My flight is at 3 p.m. So, I'll need to check in. Is it checking start at 5:30?

Favour Nwachukwu: 3 p.m. It's 3 p.m. What's the time This is 12. You went This is one.

Favour Nwachukwu: You went so early.

Vanessa Gwanvoma: I needed to be there before I can so I can be able to attend the daily stand up...

Favour Nwachukwu: Yeah yeah yeah yeah yeah.

Vanessa Gwanvoma: because I don't want to be out of network.

00:05:00

Favour Nwachukwu: Okay.

Vanessa Gwanvoma: So when are you returning back?

Favour Nwachukwu: You say st Philip is the star boy of the week.

Philip n. Tete: Hey guys,...

Philip n. Tete: how's it going?

Vanessa Gwanvoma: Good morning. I'm afraid to greet

Favour Nwachukwu: When I was in primary school there's this thing they used to do.

Vanessa Gwanvoma: Okay, congratulations No. Hello.

Favour Nwachukwu: So when you perform best in the week in English and mathematics, it's like a cardboard they pin it to your cloth.

Favour Nwachukwu: They call it star of the week. So yeah.

Philip n. Tete: Yeah. Yeah.

Philip n. Tete: Did we have those? I don't think we had those. at least the schools that I went to didn't have them. Maybe the more private schools would have. but the schools I went to didn't have All right. Good stuff. There's a lot for us to cover on today. I don't know how much we're going to be able to get to it. Considering that you guys didn't turn in the homework, which is what I want us to first talk about. guys, at this point, we are in the Hunger Games. I don't know if you guys know but what that means is that the next 90 to 120 days is going to either make us or break us, right?

Philip n. Tete: And I believe in our ability to make the next 90 to 120 days make us, I 100% believe in this team and for us to be able to pull off what we need to be able to pull off. But it's going to require some really strong tightening of things, We need to be on top of everything starting with me, I need to be setting the example of that. And so when an assignment like that is given guys, you definitely without a doubt have to complete it. No exceptions. It doesn't matter what's happening. you could have electricity blowouts, thunderstorms, earthquakes, tornadoes, but you still have to get it done, right? That's the only way we're going to get through this 90 days. as you can see, there are people outside of us that are actually believing in this mission and they are backing that up with a financial commitment.

Philip n. Tete: And once we start taking people's money, right, it's a whole different ball game. I can spend my money anyhow I want, but I can't spend people's money anyhow I want. Right? So, we need to really be on point in making sure that we're really addressing and...

Philip n. Tete: getting things done in the way that we're supposed to. So, I want to give you guys the space to walk me through what held you back from being able to in the assignment and what's going on. Okay. You want to go first?

Favour Nwachukwu: So for my own end first of all I just recovered yesterday and...

Favour Nwachukwu: I was

Favour Nwachukwu: running between WhatsApp integration, getting my key results, the answers to the questions of my key results ready, implementing the better testers feedback and getting ready for this

meeting because for me to be fully prepared for this meeting and what you asked of me, my key results the answers to those questions have to be completed. So it's dependent on it. So by the time I was able to finish that, I saw that I was running out of time. I didn't even know it was time for meeting until I saw Eloisa's message in the group chat. So, it was a bit much for me, maybe because I didn't really prioritize it so well.

Favour Nwachukwu: And I promise it's not going to happen again.

Philip n. Tete: Okay.

Philip n. Tete: So, the health challenge with overall capacity issue was the issue there.

Favour Nwachukwu: Yeah, cuz it held me back from working on Monday.

Philip n. Tete:

Philip n. Tete: Vanessa on your

Vanessa Gwanvoma: Okay, from my end the only reason why I have not been able to submit for time before now or even up to now is basically because I feel like the informations I need to present whatever I need to present they are too much and yeah they are just so hectic and it was a little bit complicated for me to put them together and like I said months ago or weeks ago I have these informations in different spaces. So I was just trying to upload them on Google Drive and given the fact that since I have other things I was doing I could not be able to meet up presently I'm actually at the airport so

00:10:00

Philip n. Tete: Got you. the very important thing here, right, is ...

Philip n. Tete: what I'm seeing here is just What I'm seeing here is a lack of communication.

Vanessa Gwanvoma: Okay.

Philip n. Tete: If for whatever reason you can't complete something for whatever it is, we need to be proactively reaching out and saying, "Hey, this I can't get it done in time for XYZ reasons. how can we figure this out?" Right?

Vanessa Gwanvoma: Let's do

Philip n. Tete: Sitting and not communicating that and then we have to get to the meeting to be able to find out that we haven't actually done the work that we're supposed to do becomes a challenge, right? Because what this means is that we're going to have to scrap today's meeting and reschedule. And if you look at it, that's 2 hours of what are the most important people in the company. So that's eight hours of company time that we're essentially just scrapping, So let's ensure that we communicate proactively in this type of situations where we might not be able to get to some specific things that we need to get to. All right.

Philip n. Tete: Yeah.

Philip n. Tete: Favor. Yeah.

Favour Nwachukwu: Okay. I had wanted to say...

Favour Nwachukwu: if we could just go over my care right now maybe. So yes. Okay. Let me share my screen.

Philip n. Tete: Yeah. Yeah. So, here's what we're going to do. We're going to do two things. Okay. One, we're going to first look at the assignment and see what parts of the assignment are presenting a massive challenge so we can blend that up. make sure that you guys have something that you can actually get done and then two we're going to look at favor your OKR and make sure that we address the questions and the support that you need on that. Vanessa, let's start with you. You mentioned there were quite a lot of things that you felt like were too much for you to complete.

Philip n. Tete: So kind of walk me through where you found the challenge. Mhm. Yeah.

Vanessa Gwanvoma: Okay,...

Vanessa Gwanvoma: let me say real milestone example. I wanted to find out because the questions were a little bit confusing particularly at that stage. So I think you asked me for drawing or specifications. Am I correct? I need to present for a real case. I just present every single thing from drawings financial flow and...

Vanessa Gwanvoma: and let me say basically everything from start to finish. Is that what you're asking now?

Philip n. Tete: Correct. Yeah.

Vanessa Gwanvoma: If I need to put that all together because I have them in WhatsApp. I need to really sit down and go through the stages and really organize in a way that you can be able to understand.

Vanessa Gwanvoma: And I also thought that if in case you just want me to go through the WhatsApp book where I upload this information, it will be easier also for me.

Philip n. Tete: So part of the reason why I'm doing this is because this is the exact problem that we're trying to solve, So you see...

Vanessa Gwanvoma: Yeah. Have a good

Philip n. Tete: how things are very scattered for you. it is the exact problem that we need to solve and the way we're going to solve that is actually doing that for a real life real case scenario. Right? So in your collecting all of this information and putting it together, it would provide the exact operating procedure that we need to be able to have in place moving forward. So you never have to be collecting a bunch of information to put together so that's why it's important to pull all of that stuff up. So the WhatsApp groups, the communications that are happening there, extract that.

Philip n. Tete: the spreadsheets, the photos or whatever else you have things, extract them, put them together in line with the assignment. And then we would discuss the process that it took for you to be able to do that and what the new process would need to be that we can then implement and how that can be translated for a groundwork process, right, for the contractor. Does that make sense? Yeah. So, it is actually very intentional. I know it's going to be a lot because you're going to have things scattered

everywhere. But in that exercise of doing that, it would then reveal all of the things that we need to have revealed so we can actually fix the problem.

Vanessa Gwanvoma: Okay, is clear to me.

Philip n. Tete: So is the assignment clear to you now in terms of what needs to be done?

Vanessa Gwanvoma: And then I had another challenge inspection information. I don't know maybe it's the English that is too high am I supposed to also...

Philip n. Tete: Okay. Mhm.

Vanessa Gwanvoma: because we spoke from our last meeting the three of us there are many things that Cameroonians let me say because we just have to work we don't really pay attention to inspection all the cost because I noticed that you asked about the cost how site contractor is being paid and all those kind of things if I'm supposed to prove for that there's nowhere in my record side for contractor is paid.

00:15:00

Vanessa Gwanvoma: I don't know if you so I literally just pay people for their work...

Philip n. Tete: Yeah. Yeah.

Philip n. Tete: Yeah. Now I understand.

Vanessa Gwanvoma: which most of my clients any work that doesn't look like physical work they seem to not understand mental work they don't understand...

Philip n. Tete: Mhm. Yeah.

Vanessa Gwanvoma: why you need to pay for mental work because since they cannot see the work they building it feels like so because of that we literally don't define a particular way of payment for that so I don't know...

Vanessa Gwanvoma: how I'm supposed am I supposed to do research for those kind of situations and just put Okay. I conduct the inspections myself.

Philip n. Tete: So no no no so whatever you have as your inspector information right do you conduct inspections on the okay yeah so whatever that is right whatever the reality is that's...

Philip n. Tete: what we're trying to capture because what's going to happen right Vanessa is that we're going to capture the reality and then within that we're going to identify loopholes right these are some gaps that exist in the current reality of how things are working. And this is where we need to tighten up, This is where we need to create standards for. This is where we need to create SOPs for or this is where we just need to maintain it because the reality actually is perfect for the standard that we want to perform at. Right? so I point those things out and I list them out the way I'm listing them and I'm very much aware that some of them you're not going to be doing, but it is for you to pull everything that you can pull in terms of what you're already doing so we can compare what it should be.

Philip n. Tete: Yeah. Yeah.

Vanessa Gwanvoma: Okay. Yeah.

Philip n. Tete: So the inspection information, you don't have a separate person doing inspection. you should have that, your contractor updates, for example, I'm pretty sure you have a different way that you get contractor updates. I'm pretty sure when you visit the site, you just get updates from them. You also have your weekly team meetings that you have, right, on Saturdays and stuff like that. So, yeah,...

Vanessa Gwanvoma: Yeah. Yeah.

Philip n. Tete: that kind of stuff, right? let's go ahead and pull that up.

Vanessa Gwanvoma: There's another question that confused me. I think it was the contractors details and...

Vanessa Gwanvoma: their scope how many project they can be able to control at a particular moment their scope of where they let me say their region of influence that was a question that I was just confused if I'm taking a particular case study is that question necessary or...

Philip n. Tete: Yeah. Yeah.

Vanessa Gwanvoma: I was thinking perhaps you're asking me to propose or if in case I have a contractor or I was just confused me you're talking about is it somebody else like I was just

Vanessa Gwanvoma: view on what's...

Vanessa Gwanvoma: how to answer that.

Philip n. Tete: Yeah. ...

Philip n. Tete: so what we're trying to understand there, is how the coordination of your contractors happen, So, the best way to answer that question is just the overall process of how you coordinate the contractors.

Vanessa Gwanvoma: Okay.

Philip n. Tete: So, we're going to use that specific project that you're going to submit is on this project, this is how I coordinated these guys. This is where I put them from, Whether maybe you put someone from Dom or from Duala, whatever the case may be, right? So that's...

Vanessa Gwanvoma: Okay.

Philip n. Tete: what that addresses.

Vanessa Gwanvoma: Thank you.

Philip n. Tete: Yeah. Yeah. Perfect. any other questions around the assignment there? All right. Cool. so let's definitely take some time and work do that. what I'll do guys because this is going to be a high level work we're going to have this session on Friday okay so I'll give you guys today and tomorrow to work through it make sure that you have it fully prepared and then on Friday we can have our session to fully discuss all right perfect favor were there any questions for you on the assignment

Vanessa Gwanvoma: Okay.

Favour Nwachukwu: Okay. ...

Favour Nwachukwu: not really. It was clear but there was one major question.

Philip n. Tete: Okay, let's go into your Mhm.

Favour Nwachukwu: 10 15 projects run end to end on ground work today. So I came up with let me share my screen. This is before my care. Let me share my screen with you.

Favour Nwachukwu: As much as I could not get everything done, I have something we can actually go over.

Favour Nwachukwu: And I think by going over it is going to enlighten me more while I prepare for Friday. So right now Okay.

Philip n. Tete: So here's...

Philip n. Tete: what I'll do. because I don't want us to go to incomplete stuff. give me a high level overview of...

Favour Nwachukwu: Give me a minute.

Philip n. Tete: what it is and what your core question is so we can get ahead and address that and then focus on refining your OKR.

00:20:00

Favour Nwachukwu: So when you set fully operational, does he include money moving through groundwork? This is both sweet.

Philip n. Tete: That's a decision that will need to be made once we have that call.

Favour Nwachukwu: Then what is a verifier allowed to say? Okay.

Favour Nwachukwu: I'm guessing this is also during the call. What counts as sufficient evidence for a milestone and...

Philip n. Tete: Correct. Yeah.

Favour Nwachukwu: who is on call when verification? So you just answered this one. That is all for now.

Philip n. Tete: All right. just go ahead keep your screen shared because we're going to move into your OKR and discuss that. but guys really important that you submit this at least have some mercy on me, Give me enough time to review it and be fully prepped. If you send it to me 2 hours before the call, I will not be able to have any real preparation. So 12 hours would be good considering the time zone differences. it might have to be something like 16 hours. before the call to submit that so I can have enough time to review it and also fully prepare.

Favour Nwachukwu: Okay. Yes,...

Philip n. Tete: Okay, All Can I get you guys's full commitment to get that done thoroughly before our call?

Favour Nwachukwu: you have my commitment.

Vanessa Gwanvoma: Yes, sir.

Philip n. Tete: All right. Favor, let's run to your key results and address And Vanessa, this is important for you to be on, because your unfavors your work intertwine like rice and beans. So,

Favour Nwachukwu: So okay I made some observations which is very important for me because I am on the production level of groundwork. the statement 15 active projects does not really apply to me and this is why I said so I proposed this was what I actually shared with you that I'm proposing funded project rather than the 15 active projects because when I start doing the measurements if we end up landing nine and all nine of them run clean is also a product

Favour Nwachukwu: But it's not a 60% score.

Philip n. Tete: When you say run clean,...

Philip n. Tete: what do you mean?

Favour Nwachukwu: Everything works as expected. No box like the budget calculator works. Every single feature is clean.

Philip n. Tete: Mhm.

Favour Nwachukwu: It's a product win. So let's say we have 15 active projects working perfectly. Does it when it comes to measurement depending on Louisa's stated standard I'm not sure...

Favour Nwachukwu: how that is going to be graded for me. So this was why I said this that if we land nine and all nine of those projects run claim it's a product win but not a 60% score.

Philip n. Tete: What is your...

Philip n. Tete: what is your key result?

Favour Nwachukwu: My key result is ensure 100% of funded projects are fully operational on groundwork starting from the project setup the milestone tracking verification evidence updates and...

Philip n. Tete: Correct.

Favour Nwachukwu: payment workflows functioning end to end.

Philip n. Tete: So your key result is not hinged on the 15 projects, right? It's hinged on 100% of things that are actually funded being done.

Philip n. Tete: So if only nine end up being funded and 100% of them have been done, then your key results would have been achieved. So your key results is 100% of funded projects fully operational on ground work.

Favour Nwachukwu: No, please.

Favour Nwachukwu: Can you repeat that part? Okay. Mhm.

Philip n. Tete: Which means if nine is the total number of projects that are funded on groundwork and those nine are fully operational end to end...

Philip n. Tete: then you would have achieved your key results.

Favour Nwachukwu: Okay.

Philip n. Tete: So the 15 is not part of your key results. Right? The 15 is a general objective for the company. Yeah.

Favour Nwachukwu: Thank Coming to what shifts do I need to make to achieve my key results. So the first one here is build from better feedback and observed drop off not from the road map because now the better feedback is my priority. So right now what real users struggle with decide decides what I build next ahead of anything I had previously planned. Then these are the shifts.

00:25:00

Favour Nwachukwu: The second one is stop being the manual intervention when you notice a bug and then I just come in and fix it. This is for me personally because every time I fix a record directly in the database I'm hiding a defect from myself and...

Favour Nwachukwu: from you guys. Yeah. So it's defect first best and...

Philip n. Tete: Yeah. Yeah.

Philip n. Tete: It's really good.

Favour Nwachukwu: Then the next one is instrument before building. this is really important for me because I cannot score myself. So because nothing in the product records whether a project actually completed the food chain,...

Favour Nwachukwu: adding that tracking in week one works and not week eight because I had it in week eight before. Okay.

Philip n. Tete: Can you explain that further...

Philip n. Tete: because I don't think I understand that.

Favour Nwachukwu: So, I'm guessing you and maybe Ala will be the one watching my KR. Okay. So, there is nothing in the pipeline that states when a project is actually completed...

Favour Nwachukwu: because we don't have any active project from real users. So when we eventually get real users and the project project start to finish we do have stages and payment mileston but there is no tracker from the admin section as to yeah okay so that is the third one and...

Philip n. Tete: Mhm. Got you.

Philip n. Tete: Understood what's happening on the project and stuff like that. Yeah. Correct.

Favour Nwachukwu: the next one is to always ensure I

Favour Nwachukwu: make a push weekly. So as much as we do have our daily standups and...

Favour Nwachukwu: Monday and Friday meetings and sure sorry I'm echoing so releasing something working to production every single week.

Philip n. Tete: That's fine.

Philip n. Tete: I'll fix that. Hold on one second.

Favour Nwachukwu: Okay. Yeah,...

Philip n. Tete: All right. how about now?

Favour Nwachukwu: much better. So, releasing something working to production every single week with the weekly gate meeting. That's our Friday meetings as my deadline and my reporting point.

Favour Nwachukwu: So, it's going to show what it did to the phone numbers that Elisa is going to create.

Favour Nwachukwu: And it's going to replace the pattern of disappearing for three weeks and then making a push on a very large feature all of a sudden. prior to now I do ship weekly almost on daily basis but this is more like a better measurement. I actually do ship every day.

Philip n. Tete: We might actually even Move that to ship in every two days.

Philip n. Tete: Good. Yeah.

Favour Nwachukwu: So the next one is quartard for this quarter.

Favour Nwachukwu: the customer journey screen screens only one design option per screen instead of two and Cameroon only but this is on a longer term but I just needed to have it here because eventually if it's not scoped by the time we land Cameroon and we want to extend to other countries it's going to be a massive burden on me to start replicating I mean using

Favour Nwachukwu: The word replicating makes it sound easy. But because I did not give room for those tenses, it's going to be a breakdown for me.

Favour Nwachukwu: So I'm having it here so that at moments where I do not have a heavy work to do, I can just get them done.

Philip n. Tete: Yeah, based on...

Philip n. Tete: for your own context, based on how things are shaping up, we might be moving to other countries much sooner than expected. Yeah.

Favour Nwachukwu: Then the last one on my ships is decide and log rather than queueing for decisions from you. I know I make product decisions but there are certain times where we really do need to get on meetings.

Favour Nwachukwu: you may vanessa and Louisa and the earlier this discussions I had and concluded the better for me so that I don't go ahead making a product decision and then pushing to production and it comes to you for review or maybe pushing to development and it comes to you for review and...

00:30:00

Favour Nwachukwu: the entire thing is out of scope for that particular time and I have to go back and redo it there.

Philip n. Tete: Yeah, that's a major one,...

Philip n. Tete: Cuz that cost us a lot of time on the previous round, and considering we don't have any time at all, that should become one of the most important things. So, we're not redoing work.

Favour Nwachukwu: Okay, so this is all the shifts.

Philip n. Tete: Yeah. pretty good.

Favour Nwachukwu: Any comments?

Philip n. Tete: I think these are quite decent. It really captures some of the mistakes that we've made so far. yeah, I think it's good.

Favour Nwachukwu: Okay, the next one is...

Favour Nwachukwu: what supports do I need? after this fixes with the better testers, the next phase for me is really going to be very critical and for every time I reach out for support I get immediate feedback so that it will ensure I am on my game.

Philip n. Tete: You didn't receive the email that I sent to you to access the platform you just go ahead and...

Favour Nwachukwu: So the first one is from you.

Favour Nwachukwu: I know we've done introduction with switcher and as I think you said they've given access to their environment but I don't have that access yet because switcher is the next for me by the time I conclude better testers now I will have to check my throw let me check it now instead of guessing ...

Philip n. Tete: yeah if you haven't gone to that and then it probably has already expired which means I have to send it again So,...

Favour Nwachukwu: switcher, sweet cher. No, there is nothing here.

Philip n. Tete: it didn't come in.

Favour Nwachukwu: No, I didn't. Do I have any in my sperm? Nothing. So, no. Because in my week two,...

Philip n. Tete: All right, I'll just go ahead and give you login. let's go ahead and address that right now this thing essentially you mean when you succeed cuz there are no ifs Yeah. Yeah.

Favour Nwachukwu: which is next week, if I succeed with everything I have this week, So, When I succeed and there's something I want to start doing. if ideally it's going to take me one week, I would like to give it two more days that is a week and two days. So, taking two days for every set deadline.

Favour Nwachukwu: Make requests.

Philip n. Tete: All right. So, I'm adding you into a group on WhatsApp with the Switcher team. And in that group, you should be able to put in request and all of that. So you can just let the team know that the team invitation that was sent to you never arrived and you haven't been able to access the suture platform as a team. All right. give me a second here.

Philip n. Tete: All right, carry on. I'm walking to the invitation. Yeah.

Favour Nwachukwu: All So the next one is notes and recordings from every discovery call. So for every call that we have boots group call that is already happening which is why I said ongoing.

Favour Nwachukwu: So for any call that is not for every external call I would like to have notes in recordings within 24 hours after that call happens because it's crucial for me instead of having to reach out privately or...

00:35:00

Philip n. Tete: Fair enough.

Favour Nwachukwu: having you serve as an intermediary to be able to get what I want. So the next one is for you Vanessa. and this is much as important as every other support that I have here. The milestone verification standard.

Favour Nwachukwu: you need to let me know what counts as an acceptable evidence because if I'm going to write a code for evidence acceptance,...

Vanessa Gwanvoma: Okay.

Favour Nwachukwu: it's going to be based on industry standard and you need to give me that industry standard so that I can set it right from the root instead of having to cut in between production to make edits and maybe break things in the process. So this is for this blocks verification build and this also blocks issuance of certificate for any stage completed. Okay. And the next one is the current Cameroonian bill of quantities for do okay I think I have duala but there is a bit of discrepancy in the data that I have right now.

Favour Nwachukwu: I know I have made changes and I have fixed the budget estimate based on our last discussion but I have not tested it and I did it in such a way that for everybody that has a project created right now it's going to reflect in the current project. So everybody that complained, my budget is too small. If they check now, it must have increased. And for people that are complain maybe the budget is too high, if they check now, it should be close to what it should be. But I have not said that publicly yet because I have not tested it out. So once I complete the testing, this particular line can be closed.

Philip n. Tete: What's ...

Philip n. Tete: but what's causing the discrepancy? Did you uncover what the issue was?

Favour Nwachukwu: Yes,...

Favour Nwachukwu: I did. It's in my percentage ranking. So because the percentage is always a not exceeding 100 having to cut this thing in and the fact that the budget is given before the project is completely created. So this means I have to factor in all the fees. So it's more like looking ahead. this is

what this person is going to be charged. Professional fee is this and comprises of this. So having to put them all together is what is causing the fancy.

Philip n. Tete: But why is it causing a discrepancy for some people and...

Favour Nwachukwu: It's a math mat.

Philip n. Tete: not for others?

Favour Nwachukwu: So it depends on location where the project was created because some cities own were perfect as when we had that review and I have a Yeah.

Philip n. Tete: So hold on one second. Right. So, I sent you two names of people who complained that their budget was just way off, right? their budget was super low, based on what they're building. did you verify those two people and what the issue was with them?

Favour Nwachukwu: No, not yet.

Philip n. Tete: ...

Favour Nwachukwu: But after Mhm.

Philip n. Tete: because you have to go to specific use cases, those are two use cases for us to understand what actually happened with them specifically to be able to address that at the core of it because I understand a lot of different cycles has gone through this budget calculation what you're explaining favor is based on the last meeting that we had which was giving you clarity around how much professional fees is and how to calculate that including the contingency percentage only as well that's what you're talking about which is very different

Philip n. Tete: from the challenge that these two users have reported as an issue with the budget.

Favour Nwachukwu: Yeah, I'm going to look into that. But I have one more thing to say for this question is for Vanessa.

Philip n. Tete: Mhm.

Favour Nwachukwu: We are during our last meeting you said something about I think you call them slabs after a floor is built the decking or...

Favour Nwachukwu: something. Yeah.

Vanessa Gwanvoma: Yes. Thank you.

Favour Nwachukwu: So for cases where someone is building a bungalow the decking is not needed and...

00:40:00

Vanessa Gwanvoma: Yeah. Yeah.

Favour Nwachukwu: in the bill of quantities that you sent to me and in that meeting that we had I don't think that king cost was covered give me a minute let me check the question I had for you before Now

because I think answering this question is going to here. So another one is while I'm getting that question let me go through run through this one.

Favour Nwachukwu: How many professionals does each project actually require? Is it the same thing that we currently have for every project,...

Favour Nwachukwu: whether a bungalow or a duplex or a commercial building or Yeah.

Vanessa Gwanvoma: Yeah, the amount of professionals remain the same.

Vanessa Gwanvoma: The only thing that might vary might be when it comes to the level of the roof. If the client chooses a concrete roof, we might not need a carpenter. I don't know if you understand, but if the client chooses standard roofing that has to do with aluminium sheets settling with a carpenter,...

Vanessa Gwanvoma: but apart from that, every other process is the same.

Favour Nwachukwu: Okay. the.

Philip n. Tete: All right.

Philip n. Tete: And favor, was the timeline also adjusted? has that been pushed to life? Okay.

Favour Nwachukwu: Yes I have adjusted it and I have pushed it but I have not tested it. Yeah. So this support I listed here is something that can reoccur in cases because we might go through my push and as much as I'm hoping that is that nothing else is going to come up if something still comes up it's still going to need support from Vanessa which is why I have them here so that even when you are planning making your own plan you can factor me

Philip n. Tete: Yeah, right.

Favour Nwachukwu: Okay.

Philip n. Tete: I would expect there is no way for Vanessa for you to achieve your key results by the end of the OKR if favor doesn't achieve Harris and vice versa. If that happens, then there's something wrong somewhere, because you guys's key results are intertwined with each other. It's just not going to be possible for favor you achieve yours without Vanessa achievement Harrison and the other way around. So there's going to be a lot of collaboration. I would expect you guys should be getting on calls at least twice a week, every single week. and just making sure that happens. And obviously the call on Friday is going to set the tone for that.

Philip n. Tete: because that's going to give clarity on the overall scope of what needs to be done. because favor as you rightly mentioned in your breakdown, every single thing that you do should be based on what's actually real and what's actually happening on ground, right? No longer concepts or...

Philip n. Tete: ideas of what we think should be, so yes, I expect that collaboration to continue ongoing. Yeah.

Favour Nwachukwu: Okay, I'm still going to get back to that,...

Favour Nwachukwu: but let me finish up with the support. So, this is for Agreed definitions for each phone for now stage. So, when I read the transcript,...

Favour Nwachukwu: Elois was going to create a phone area. So this is for her what's the agree definition for each of those funnel stages what they are so my own dashboard is going to measure nothing without them when I say dashboard I mean everything I have here it's more like saying acceptance criteria for marking a tax

Philip n. Tete: How does this...

Philip n. Tete: how does this impact The funnel that has created right is for lead generation right it's a lead genen funnel it's a client acquisition funnel no it's just primarily marketing...

Favour Nwachukwu: I thought I heard it was company school based. okay.

Philip n. Tete: what were you think it was when

Favour Nwachukwu: I thought it was, how do I say this? just the way I have this week two this week three and in her funnal for stages as we have 90 days maybe the first 30 days she has funnel one and in that funnel one she has things that is expected to be done or something that was what I

00:45:00

Philip n. Tete: Got you.

Philip n. Tete: Okay, understood. no, you and I are defining the project scope and the timeline for the project, including Venice as So, again, a bunch of these things will be defined on that call that we have on Friday. So was super clear on the different gates that would need to be there at the different stages the different workflows and SOPs as well.

Favour Nwachukwu: Then this is general the next one.

Philip n. Tete: Yeah. So yeah,...

Favour Nwachukwu: You want to say something?

Philip n. Tete: so that specific support there you can just scratch that. when you say approved ceiling for tulun spend, what do you mean?

Favour Nwachukwu: Wait a minute. So it means error monitoring, analytics, evidence storage.

Favour Nwachukwu: In cases so how do I put this as support time give me a minute let me think I'm not sure...

Favour Nwachukwu: how to put it simply so preapproved selling to spend number one is there resources it's not budget project allocation.

Philip n. Tete: do you mean?

Philip n. Tete: Do you mean What is the budget allocation?

Favour Nwachukwu: So the resources I work with now we're getting to the stage where project is going live and we're going to start onboarding real users soon and we are still using free tiers for some of the

services and these free tiers come with some limits. For instance, it's going to block error monitoring analytics and evidence storage.

Favour Nwachukwu: Maybe when one project begins with one real user and they are already uploading evidence, conversations are happening back to okay.

Philip n. Tete: I understand. All So what I'll need for you to do there, right, is just to do a breakdown of what those two links would need to be and what the cost of that is so I can just allocate the budget for it at the stage for which the budget allocation will be needed, right? Because most of these twos would be they are user based,...

Philip n. Tete:

Favour Nwachukwu: Okay. Mhm.

Philip n. Tete: right? So the cost goes up as you get more users on

Favour Nwachukwu: Not just user based. No, not just I'm emphasizing more on the communication.

Favour Nwachukwu: So I didn't want to say anything because I didn't want to make promises and not deliver but I have found a way to WhatsApp kind of conver communication into the platform and at the same time synchronizing it with go high level. I think I already set the tone for that so that documents can be shared in that chat. the user gets if the admin replies or Vanessa if essa is the handler. If Vanessa replies from go high level If the user responds Vanessa gets a notification for every message that is sent from go high level when you log into a particular project it's recorded on that user's composition trail...

Philip n. Tete: Mhm. Okay.

Favour Nwachukwu: where it's sent from. Yes.

Favour Nwachukwu: So I know it was supposed to be a feature...

Philip n. Tete: Understood.

Favour Nwachukwu: but I think at the same time it's one of my deliverables.

Favour Nwachukwu: So I thought and I think that was what took my time why I didn't get much thing done. So Okay,...

Philip n. Tete: Okay.

Philip n. Tete: Yeah. I completely understand that. Just give me the scope of the different softwares and things like that and kind of the overall cost and breakdown of that.

Favour Nwachukwu: my first proposal is define fully operational?

Favour Nwachukwu: That was one of the questions I asked you earlier. so that my key results can actually be explored. Yeah, you've answered yes,...

Philip n. Tete: Do you have an answer for that?

Favour Nwachukwu: you have answered that already.

Favour Nwachukwu: Then the next one is build a project health signal that flags when projects go quiet.

Favour Nwachukwu: And to emphasize more triggers would be no activity. So when there is setting it as equalite should I use a word criteria. okay. Yes.

Philip n. Tete: I complet I no I completely get it.

Philip n. Tete: I already do so most of these I understand so no need to go into them. the big things were up. So I also understand the mental scroll down on point 4. Yeah. Uhhuh.

00:50:00

Favour Nwachukwu: If I say it does not drive me crazy some days is a lie because switching can really be very tricky. As when I was working on the design the screens back in the previous quarter having to get back into writing code was somewhat challenging for me. not that this is not I mean, it's what I'm used to, but sometimes it can just disrupt one's state of mind. So, yeah.

Philip n. Tete: Yeah. Yeah. Happens to me as well. That's what happens when you're wearing multiple hats, It's that switching from one brain to another becomes very difficult, Switching from strategy to execution and...

Philip n. Tete: into management is quite hectic. So, I get that the way that I do it is I do it through time blocks. Okay. so those time...

Favour Nwachukwu: Yeah. But doing it through time blocks.

Favour Nwachukwu: Maybe I have a target for week one and this target for week one is something that the flow is design engineering and product ownership and they are dependent on each other. So I cannot say okay let me start off with engineering.

Philip n. Tete: but that dependency is on stages Right? So, It's going to be a flow from one thing to another. Right? So, you might need to design first and then before you move into engineering and...

Favour Nwachukwu: Yeah.

Philip n. Tete: then switch back to being a product owner to see what the engineer has done, So, you can still do time blocks. your time blocks might be different, right? you might be doing instead of daily time blocks, you're doing weekly time blocks, Where a specific day of the week, you're blocking that time for design work and another two days you're blocking it for engineering work and another one day you're blocking it for,...

Philip n. Tete: product design work versus my time block is daily, right? So, some part of the day is for X, another of the day is another part of the day is for Z. So,

Favour Nwachukwu: And I was going to suggest...

Favour Nwachukwu: if we can reduce the meeting times or meeting days. I mean maybe Wednesdays, Fridays because sometimes I work through the night and I nap on my PC in between works. So, sometimes I really skip meeting time until maybe I get a notification and having to come on camera right after.

Favour Nwachukwu: I know it's a big ask, but yeah.

Philip n. Tete: Yeah, I can tell you the response to that ask right now,...

Philip n. Tete: And the response is no, we're not that stage of the company yet to have this is the stage where we have to overcommunicate, if not, things are going to get lost. the upside that you're thinking you're going to get without the medians would actually be a massive downside. because what would happen is that the exact problem that you're trying to avoid which is building stuff and...

Philip n. Tete: then coming back and then I'm like yeah we need to this is not out of the scope. That problem would actually enlarge itself if the median cadence reduces.

Favour Nwachukwu: Okay.

Philip n. Tete: So we're going to maintain it once we have a bigger team. so far as you're concerned right favor you're always going to be part of meetings unless you just want to be a developer then you can just do your developing thing and not worry about meetings. But aside from that you're always going to be in meetings. Yeah.

Favour Nwachukwu: Then this part is what Vanessa needs from me and how I'm going to do it. Yeah. And for these things, I actually already started setting it up. But like I said, I really do not want to make promises and not deliver.

Favour Nwachukwu: So I over deliver and then on delivering it way then we're like wow wow wow yeah to this I added that to this document.

Philip n. Tete: Okay.

Philip n. Tete: Good. You want to get your star on your shirt. I get it. All this is all super clear. Please share that with Vanessa as well so she can have some time to review it on her flight. Are you sure it's just me and...

Favour Nwachukwu: I'm sorry. Yeah. No,...

00:55:00

Philip n. Tete: you on there?

Favour Nwachukwu: no, I added Vanessa, Ala, Paris. Everybody is here.

Philip n. Tete: All right. Click on the tub there...

Favour Nwachukwu: Share.

Philip n. Tete: where you have Okay.

Favour Nwachukwu: Full access. Everybody

Philip n. Tete: All So, Vanessa, please go to that. Right. ...

Philip n. Tete: by the way, there's nothing that Favor does that you shouldn't be reviewing and...

Vanessa Gwanvoma: Thank you. Okay.

Philip n. Tete: nothing that Vanessa does that Favor shouldn't be reviewing. But as I said, if you guys achieve Well,...

Favour Nwachukwu: There are some that she would do that will review.

Favour Nwachukwu: I'm in the onsite. So that is all.

Philip n. Tete: if one person achieve their results and the other person Some cheating is happening somewhere. All you have Perfect. You have clarity. exactly what you need to do. I also understand the support that you need and on my end you'd be fully supported. Vanessa would also be fully supportive there. regarding the assignment guys as I mentioned please take the time to do that send that to me before the session itself so I can have time to review it.

Philip n. Tete: That call is going to set the tone for everything else that we do for the next 90 days. Yeah. So let's come fully prepared.

Vanessa Gwanvoma: Okay. Thank you.

Philip n. Tete: right.

Favour Nwachukwu: Okay.

Philip n. Tete: Perfect. Why not?

Favour Nwachukwu: Sorry,...

Favour Nwachukwu: Vanessa, a quick one. So, right now, nothing to add about boyquarters. I just want to get clarity on this. I do not have to add any quoting at all for boy squatters. Right. Okay,...

Vanessa Gwanvoma: Yeah, you don't need to add here.

Favour Nwachukwu: this is checked. Okay, then I...

Philip n. Tete:

Philip n. Tete: Hold on. Why isn't it in fact in

Favour Nwachukwu: because it's not part of so the teams we are charging clients for it's not going to be included.

Favour Nwachukwu: If eventually they want the boy squatters then the costing will be given differently because it's not factored in our fees because we are Okay.

Vanessa Gwanvoma: This is Let me answer. This is because in reality every single client has the taste of what they want as boy quarters. For example, I have worked with three different client. There's one that never needed a boy quarters. He just included the boy quarter is as part of one room. He gave out one room in an entire building for the boys for the security.

Vanessa Gwanvoma:

Philip n. Tete: Got it. Okay.

Vanessa Gwanvoma: Then the other one asked for a story building as in a complete duplex only for boys. Then another one just asked for something a onebedroom apartment for boys quarters.

Favour Nwachukwu: Yes. Fountain.

Vanessa Gwanvoma: So if we have to include boys quarter that is just like another project on its own. And then we talk about exterior work. I don't know if you have added that's another thing that we cannot really tell the client that this because of exterior work because there are some clients that swimming pool others like basketball others just based on the specification you cannot yeah others like fountains and other things like that will only mean that we have to act maybe put a part for boy squatter and...

Philip n. Tete: So, let's go ahead and So, if we can't really give them the cost of the boys quarter, what is the importance of having it there as part of the project creation?

Vanessa Gwanvoma: then generate a budget calculator for boys quarter differently. But the reason why we don't want to include you as part of this whole project is because for example the council doesn't take the boys quarter as something that you should be charging you for.

Favour Nwachukwu: Hey, I was not record.

Favour Nwachukwu: Is this recorded? Okay, it's transparent.

Philip n. Tete: Yeah, it's transcribing,...

Philip n. Tete: not the video recording. Mhm.

Favour Nwachukwu: Okay, I'm sorry to cut.

Vanessa Gwanvoma: So for example, if you are to build let me say a residential duplex or five bedroomedroom and then maybe your boy quarter is just a bungalow. The council will not ask you for money or they will not give you permit for Boy things like boy squatter fencing the council don't care. They don't just that one you can do as you like and they not going to give you permit for that. You don't need permit to do fence or boy squatter. But if your boy squatter already has a floor, that's a whole house on its own. For example, if he has decking, that's a whole house on it own. And they are not going to allow you do that without I don't know if you understand.

Philip n. Tete: Understood.

Vanessa Gwanvoma: So if we are to include west quarter, it need to really be something else. I don't know.

Philip n. Tete: Favor,...

Vanessa Gwanvoma: That's my

Philip n. Tete: let's just take out boys quarters from the project creation widget because it doesn't really add any value there.

Favour Nwachukwu: Okay.

Favour Nwachukwu: Then the next one should a vong be charged a suspended slap?

Philip n. Tete: right, cool. All right.

Favour Nwachukwu: Did you get that?

Vanessa Gwanvoma: No, please. Are you the explicit a bungalow literally is a house that has no decking.

Favour Nwachukwu: Sorry, it's raining here now. So, I said, should a bungalow be charged for a Does a bungalow require a suspended slab?

01:00:00

Vanessa Gwanvoma: So instead of the place or decking is rather a roof. So I think that in your budget calculator if the person choose the amount of rooms per floor I mean this floor is one and then he goes and choose a type of roof. So I think you should automatically calculate because if you wanted three floors the three floors will certainly need a roof.

Philip n. Tete: Cool.

Vanessa Gwanvoma: I don't know if you understand.

Favour Nwachukwu: here. I do.

Favour Nwachukwu: Another one. Hopefully, this is the last. We have nine rates with nothing behind them, which is So, I want to go over it to ensure that we're on the same page.

Favour Nwachukwu: the side setup, the clearing, I don't even remember what DPM is. Then the sun blinding, parapets, roof, timber, and electricals. These were the one and final finishes. These were the ones that you said the prices cannot be determined, right? ...

Vanessa Gwanvoma: The truth is this network is really a problem. I've not been able to hear all but I think it should

Favour Nwachukwu: wait. let me type it out.

Philip n. Tete: ...

Philip n. Tete: so, yeah, favor, can I'm trying to identify if this meeting is the best meeting for us to kind of go through some of those on or whether tomorrow's session on our Friday session will be better or if these are just very simple questions that you need Vanessa to verify. let's go ahead and communicate that via the chat.

Favour Nwachukwu: I think it's raining here now.

Favour Nwachukwu: So maybe it's my next one.

Philip n. Tete: Yeah. Yeah.

Philip n. Tete: Just put those questions in the chat and she can just answer yes or no. Okay. Put them in the groundwork vote chat.

Favour Nwachukwu: Okay. Okay. I will just And I think that is all from me for today.

Philip n. Tete: All right. Perfect. guys, Vanessa have a safe flight. Where are you flying to?

Vanessa Gwanvoma: Hello.

Philip n. Tete: I got All Perfect. Have a safe flight and I'll see you guys tomorrow.

Vanessa Gwanvoma: Thank you, sir. Bye.

Philip n. Tete: All right. you guys. Bye-bye.

Favour Nwachukwu: Vanessa safe lights. All night good.

Meeting ended after 01:02:53 🖐️
