

Every automated email the product sends

Requested at the 20 August meeting, for a quality review of what customers actually receive. The minutes record **two** automated emails — one for signups, one for contractor invitations. The real number is **twelve**, plus three that had been built, left deployed and reachable by nobody — now deleted. Six of the seven we send ourselves were silently failing when this audit began; all six have since been fixed.

Eight are reproduced in full below — seven of ours in both languages, exactly as sent, plus the password reset, which Supabase sends but we now write. The remaining four are Supabase's own and must be reviewed in its dashboard; they are listed at the end with the place to find each one.

8	0	3	4
SENDING	NOT ARRIVING	DELETED	REVIEWED ELSEWHERE

Six were reaching nobody. All six are fixed — and one gap is left.

The audit that produced this document found six of the seven emails below were silently failing. Two unrelated faults, neither of which showed an error to a customer or wrote anything to a log a person would read — which is why they ran for months unnoticed. Both are now fixed and deployed.

The four contractor-facing emails — the application copy, the team alert, and both decisions — were dying on a rule about how our hosting loads code, applied everywhere in the codebase except these three files. Confirmed by loading the repaired code the way the server does: it now loads, and the old version still fails.

The two homeowner emails were failing for an unrelated reason. A database change in March stopped recording customer email addresses, so the code looked for an address, found none, and returned without sending or complaining. The addresses were restored on 21 August and verified — every account now has one.

An open relay was closed at the same time. The invite endpoint accepted any recipient and any wording from an anonymous request and sent it from our domain. It now reads both from the invite record instead.

Three dead templates were deleted — a complete waitlist signup flow, its team alert and its CRM push, all still deployed and publicly reachable months after the page that called them was removed. The stored waitlist entries and the admin screen that reads them are untouched.

The four emails at the end of this document are English only — and that is the one thing still outstanding. Everything we send ourselves is written in both languages and picks the one the recipient chose. The four that Supabase sends cannot: it holds a single template per email type with no notion of who is receiving it. So a French applicant confirms their email in English, and resets their password in English, on a product that is otherwise bilingual throughout. Fixable — Supabase can hand sending back to us, which would put all twelve on the same footing — but it is a piece of work, not a setting.

One caveat worth stating plainly: “Fixed” below means the cause was removed and verified, not that we have watched each message land in an inbox. The next real application and the next approved stage are the proof.

To contractors

Everyone applying to, or working through, the Founding Network. · 4 emails

Application received

FIXED

WHEN
Sent the moment someone submits the Founding Network application form.

GOES TO
The applicant

STATUS
Was never arriving — the handler crashed before it could send, and the applicant still saw “submitted”. Fixed. The system now records who was actually emailed, so a send that fails shows up as a count on the applications screen, with a button to send it by hand.

ENGLISH We received your Founding Network application PART 1 OF 4

Groundwork
by Jalla

Application received ✓

Hi Ngo Bala Etienne,

Thank you for applying to join Jalla's Verified Build Network as a Founding Partner. Your application has been received and is now in our review queue.

Applications are reviewed manually. We verify credentials, references and past projects before deciding. We will write to you either way once that is done — and if we do not take it further this time, you are welcome to apply again.

Here is a copy of everything you submitted:

BASIC INFORMATION

FRANÇAIS Nous avons bien reçu votre candidature au Réseau Fondateur PART 1 OF 4

Groundwork
par Jalla

Candidature reçue ✓

Bonjour Ngo Bala Etienne,

Merci d'avoir postulé pour rejoindre le réseau de construction vérifié de Jalla en tant que Partenaire Fondateur. Votre candidature a bien été reçue et se trouve dans notre file d'examen.

Les candidatures sont examinées manuellement. Nous vérifions les qualifications, les références et les projets passés avant toute décision. Nous vous écrirons dans tous les cas une fois l'examen terminé — et si nous ne donnons pas suite cette fois-ci, vous pourrez postuler à nouveau.

Voici une copie de tout ce que vous avez soumis :

Review application

Account and access

Sent by Supabase, written by us — so this one we can show you. · 1 email

Reset your password

REDESIGNED

WHEN

Sent when someone uses “Forgot password?”.

GOES TO

Anyone asking to reset

STATUS

Redesigned to match the others — it was a bare text link. The new version also fixes two things that made resets fail outright: the link now works on any device, and it leads to a screen that actually sets a new password rather than signing the person in and leaving the old one in place.

IN THE CODE

docs/supabase-email-templates/reset-password.html

ENGLISH **Reset your password**

Not ours to show

These are real and they send today, but the wording lives outside our codebase. · 4 emails

Confirm your email address

WHEN Sent by Supabase the moment someone creates an account. This is the “activation” email.

GOES TO Every new signup

REVIEW IT AT Supabase → Authentication → Email Templates → Confirm signup

Confirmation, sent again

WHEN Sent when someone presses “Resend” on the check-your-email screen.

GOES TO A signup who did not get the first one

REVIEW IT AT Supabase → Authentication → Email Templates → Confirm signup

Set up your account

WHEN Sent after a guest checkout completes, so the payer can claim the account.

GOES TO Someone who paid before creating an account

REVIEW IT AT Supabase → Authentication → Email Templates → Invite user

New contractor applied

WHEN Sent by a Go High Level automation when an application reaches the CRM.

GOES TO Whoever the GHL workflow notifies

REVIEW IT AT Go High Level → Automation → Workflows

NOTE Probably duplicates the team alert above, so the team may be getting two notifications per application.

Reproduced directly from the live templates, so what you see is what the recipient gets. Sample names, projects and addresses are invented; subject lines, wording, layout and both translations are exactly as sent.
