20. Audit log

21. Pages not built yet

BEFORE YOU REPORT A BUG

22. What admin deliberately cannot do

23. Empty, zero and unavailable

The screenshots use sample data

Every screen in this guide is the real interface, captured from the running application — but the projects, people and figures in them are a worked example (a G+1 in Bonapriso, four stages done, \$96,400). No client's information appears anywhere. **Your admin will show whatever is really in the system**, which on a quiet day may be a lot emptier than these pictures.

Getting in, and reading the furniture

Two things to know before the tour: the admin has its own door, and its own permanent frame.

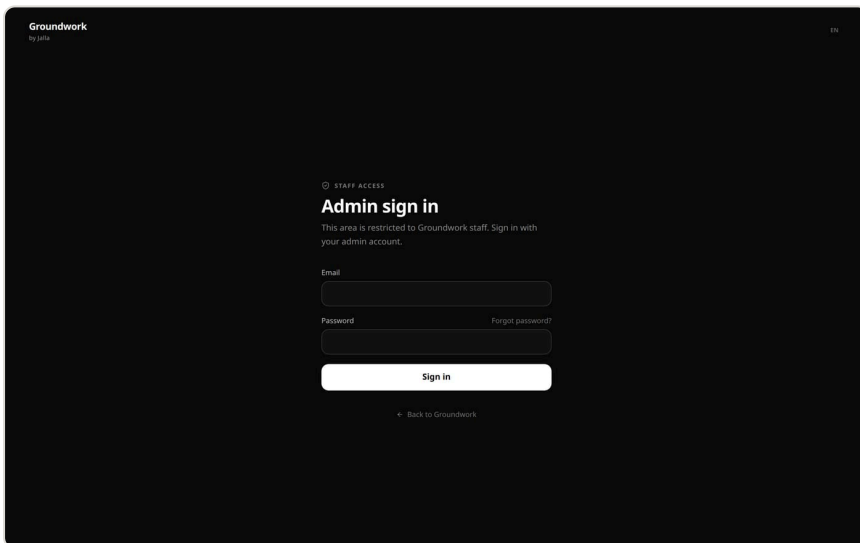

01 Signing in

GO TO www.tryjalla.com/admin/login

This is a **separate door** from the one clients use. There is no “sign up” and no Google button, deliberately: a staff account is only ever created by another member of staff. The page says *“This area is restricted to Groundwork staff.”*

If you land on the ordinary client login instead, check the address — it must end in `/admin/login`. Signing in at `/auth/login` with a staff account works too and will route you to the admin, but the restricted door is the one to bookmark.

If two-factor authentication is on for your account you will be asked for a code before you get in.

The staff door. “Forgot password?” works here and sends a real reset link.

02 The shell: sidebar, sections, top bar

Every admin page sits in the same frame, so once you can read it you can read all of them.

The left sidebar is grouped into eight labelled sections — Overview, Work, Finance, People, Communication, Acquisition, Support, Analytics and System. The grouping is the mental model: you are never hunting alphabetically, you are asking “is this about money, or about people?”

The top bar carries the page title, a search box covering projects and people, a language toggle (EN/FR — the whole admin is translated), a dark-mode toggle, a

WhatsApp shortcut, a + **New** button and the notification bell. At the bottom of the sidebar: your name, language, dark mode and log out.

Dark mode is remembered against your account, not the browser, so it follows you between devices.

Four menu items are not built yet

Inspections, Tasks, Site Managers and Agents are in the menu but open an honest “not built yet” page rather than a fake one. Section 21 covers this. Everything else in the menu is real.

Where you land, and what is waiting

These two pages answer “how is the business doing?” and “what needs me today?” — in that order.

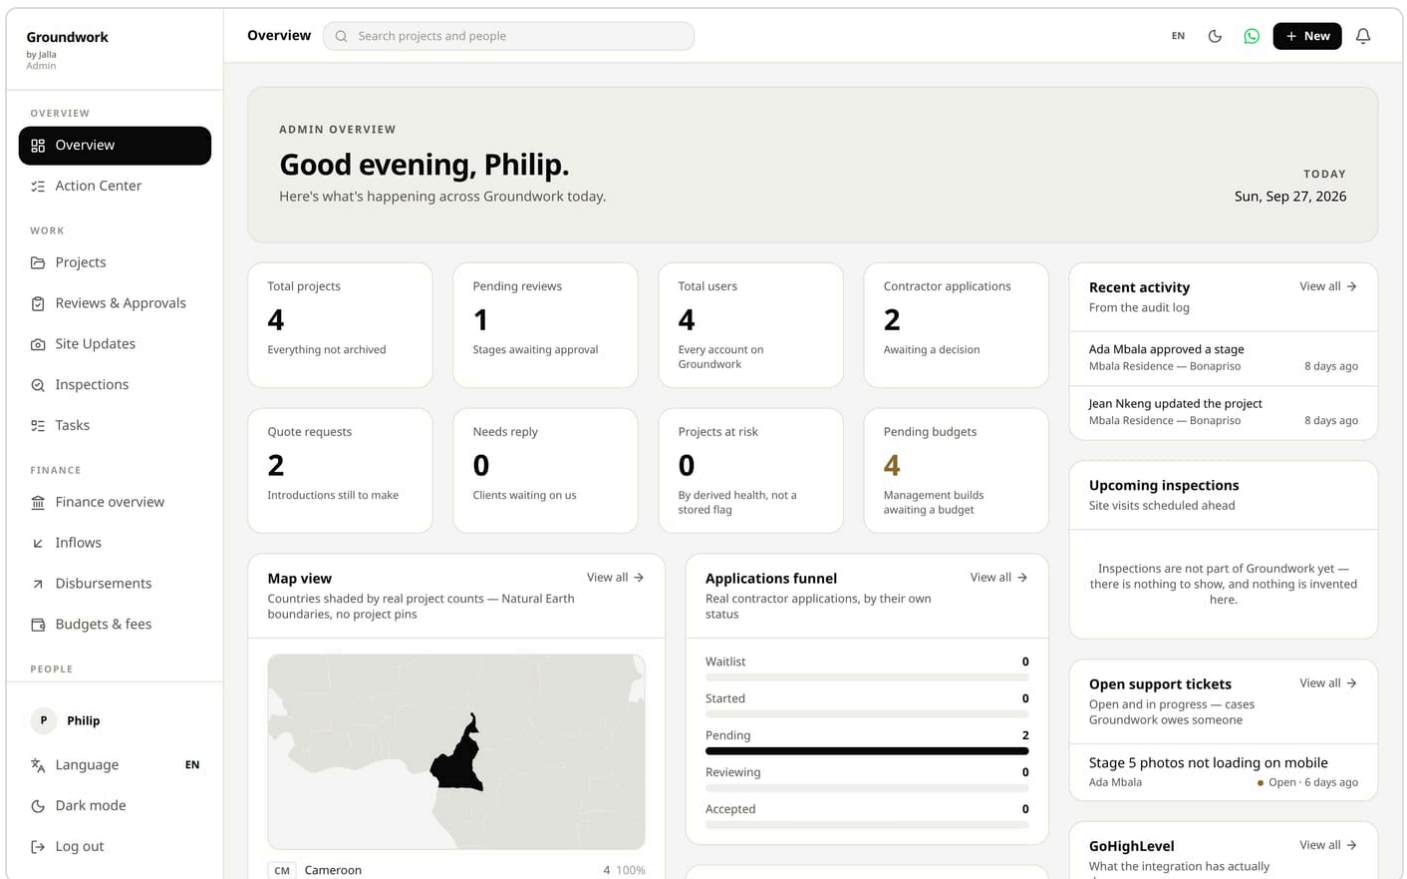

03 Overview

GO TO www.tryjalla.com/admin

The landing page. It greets you by name and dates itself, then shows **eight live counts**:

CARD	WHAT IT COUNTS
Total projects	Everything not archived
Pending reviews	Stages awaiting your approval
Total users	Every account on Groundwork
Contractor applications	Awaiting a decision
Quote requests	Introductions still to make
Needs reply	Clients waiting on us to answer
Projects at risk	Derived from live state — <i>not</i> a flag anyone sets
Pending budgets	Management builds awaiting a budget

Every card is a **filtered dataset, not a decoration** — clicking one takes you to the list it counted. Below the cards: a map shaded by real project counts per country (no invented pins), contractors by trade, the applications funnel by real status, recent activity from the audit log, open support tickets and the GoHighLevel integration state.

Lists show a five-row preview with a real “View all”. Nothing here is a sample row.

04 Action Center

GO TO www.tryjalla.com/admin/action-center

The single queue of everything waiting on the desk, ranked **Critical / High / Medium / Low**. Typical items: a project with no verifier assigned, an application to decide, a stage awaiting funding, an open quote request, a client waiting on a reply.

The important property, stated on the page itself: it is “*computed from live state on each load — nothing is stored and nothing can be dismissed.*” There is no “mark as done”. An item leaves the list when the underlying fact changes — you assign the verifier, you decide the application. That is deliberate: a dismissable queue drifts away from reality within a week.

Each row shows who and which project it concerns, and how long it has been waiting.

Stage “5 / 10” is the real position in the ten-stage model, not a percentage guess.

06 The project workspace

GO TO www.tryjalla.com/admin/projects/<project id>

Where a single build is actually run. A header strip carries the client, plan, stage position, tracking state and last activity, plus the actions: **Assign verifier**, **Jalla message**, **WhatsApp**, and **Open client view** (see it as the client sees it).

Seven tabs: **Overview** · **Stages** · **Financials** · **Site updates** · **Documents** · **Conversations** · **Activity**. Stages is where you approve or request changes; Financials is this project's slice of the ledger; Activity is the audit trail for this project alone.

The screenshot shows the 'Groundwork by Jalla Admin' interface. The left sidebar contains navigation tabs: OVERVIEW, WORK, FINANCE, and PEOPLE. The 'WORK' tab is active, showing 'Projects' as the selected item. The main content area is titled 'Projects' and shows a search bar and a list of projects. The 'Land Secured' project is selected, and its 'Stages' view is displayed. The 'Stages' view shows a list of stages, with 'Land Secured' being the first stage. The 'Selected stage' panel on the right shows details for 'Land Secured', including substages, evidence, latest site update, latest verification, milestone, and funding. The 'Financial summary' panel at the bottom shows the budget, funded amount, and available to release.

This is a *management* view. It does not become the contractor's or verifier's own screen.

07 Reviews & Approvals

GO TO www.tryjalla.com/admin/reviews

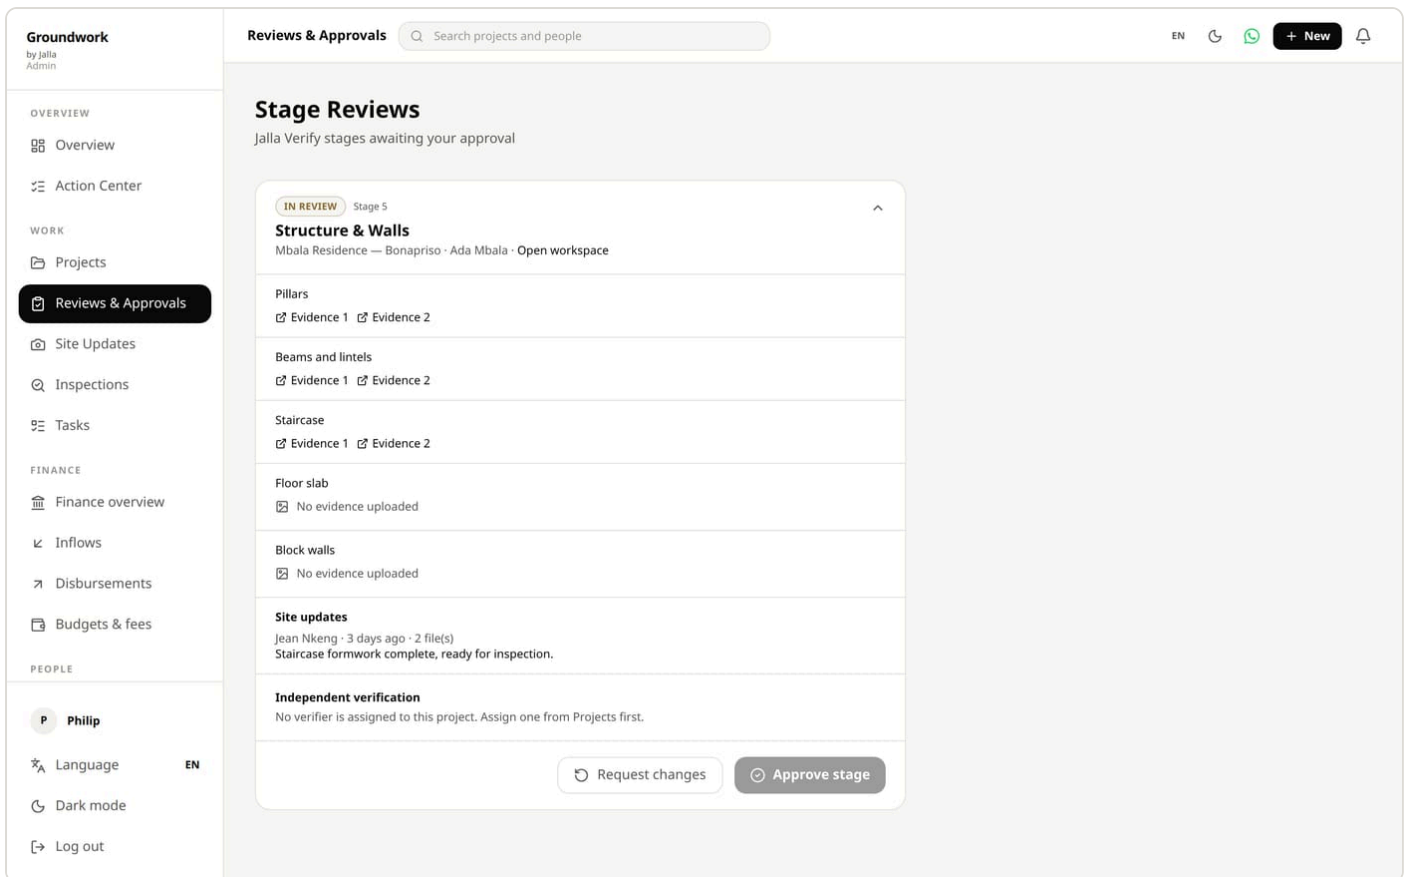

The approval queue: Jalla Verify stages submitted and waiting on you. Each card expands to the stage's substages with the evidence attached to each — “*Evidence 1*, *Evidence 2*” open the real files through signed links, and substages with nothing yet say “**No evidence uploaded**” rather than looking done.

Below that, any **site updates** filed against the stage, and an **Independent verification** panel. When no verifier is assigned it says so plainly and tells you where to fix it.

Two actions: **Request changes** and **Approve stage**. Approving is what unlocks the next stage and its milestone.

This is where the verification boundary shows

A verifier records an independent finding; **only an admin approves the stage**. If a verifier is assigned, their finding appears here as evidence for your decision — it does not make the decision.

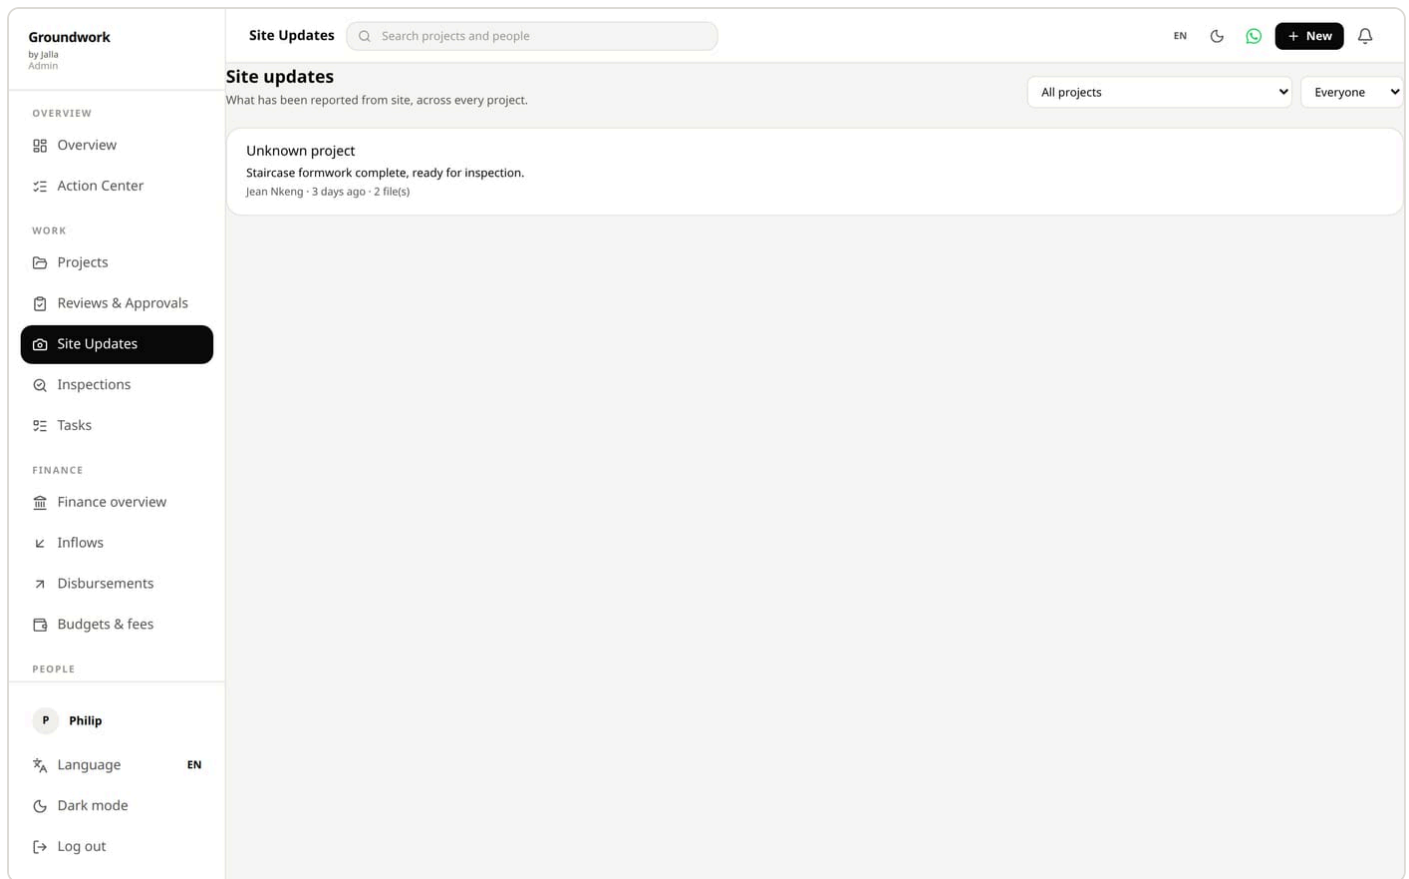

An empty queue says “All caught up”, which means submitted-and-waiting is zero — not that nothing is happening.

08 Site Updates

GO TO www.tryjalla.com/admin/site-updates

What has been reported from site, across every project, newest first — who filed it, when, how many files, and the note they wrote. Filter by project and by person.

This is the raw feed from contractors on the ground. The same updates appear inside each project's workspace; this page is for scanning everything at once.

Files open through signed links, not public URLs.

Money: the plan, and what happened

Budgets and fees are the plan. The ledger is what actually moved. Groundwork records and governs it; a licensed payment provider holds and moves the funds.

Read this before judging the money screens

Groundwork does not hold client money. It records what has been funded, authorises each milestone release, and tracks what the provider did. You will not find the words escrow or wallet anywhere, and that is deliberate rather than an oversight.

09 Finance overview

GO TO www.tryjalla.com/admin/finance

Four figures across the top — **Confirmed inflows**, **Approved for release**, **Disbursed**, and **Available project funding** (what is left after approved releases). Then *Recent money movement*: every inflow and disbursement with project, stage, amount, state and date.

Money in and money out read differently on purpose. Inflows are *Funding confirmed*; outflows move through *Release approved* → *Processing* → *Paid*.

The subtitle states the split: “Budgets and fees are the plan; this is the ledger.”

10 Inflows

GO TO www.tryjalla.com/admin/finance/inflows

Money arriving from clients, against the stage it funds. Totals for **Confirmed received** and **Expected funding**, a movement count, and tabs for **Received** and **Expected**. Each row names the client, the project and stage, the amount, and the confirmation date.

The screenshot shows the 'Inflows' page in the 'Groundwork by Jalla Admin' interface. The left sidebar contains navigation menus for Overview, Action Center, Work (Projects, Reviews & Approvals, Site Updates, Inspections, Tasks), Finance (Finance overview, Inflows, Disbursements, Budgets & fees), and People (Philip, Language, Dark mode, Log out). The main content area is titled 'Inflows' and includes a search bar. Below the title, there are three summary cards: 'Confirmed received' with a value of \$36,632.00, 'Expected funding' with a value of \$0.00, and 'Movements' with a count of 2. There are tabs for 'Received' (selected) and 'Expected'. A search bar is provided below the tabs. The table below shows two rows of inflows:

Client	Project	Stage	Amount	Confirmation Date
Ada Mbala	Mbala Residence — Bonapriso	Stage 5 · Structure & Walls	\$28,920.00	Funding confirmed Confirmed Sep 24, 2026
Ada Mbala	Mbala Residence — Bonapriso	Stage 4 · Foundation	\$7,712.00	Funding confirmed Confirmed Sep 18, 2026

“Expected” is a tranche the model anticipates; “Received” is money confirmed in.

11 Disbursements

GO TO www.tryjalla.com/admin/finance/disbursements

Money leaving to contractors, against the work it pays for. Four states across the top — **Release approved**, **Processing**, **Paid**, and **Payment issue** — then the rows, each naming the contractor, project, stage and amount.

“Payment issue” is a real failure state reported back by the provider, not a warning badge.

Everyone Groundwork works with

Four lists over the same records: clients, contractors, verifiers, and every account.

Admin manages the actor; admin does not become the actor

These pages are **management and oversight** — identity, status, assignments, projects, activity, and the actions staff may take. They are not the screens those people use to do their jobs. A contractor works at /work and a verifier at /verifiers; you never need to sign in there to manage them.

13 Clients

GO TO www.tryjalla.com/admin/clients

The people Groundwork builds for, and how their builds are going. Each card: name, email, when they joined, when they were last seen, and counts for **Projects**, **Conversations** and **Open tickets** — then their projects listed with stage, tier, status and location.

Two honest states worth recognising: *“never signed in”* against someone provisioned but not yet active, and *“No project yet — this account has signed up but not started a build.”*

The screenshot shows the 'Clients' page in the Groundwork Admin interface. The left sidebar contains navigation links for Overview, Action Center, Work (Projects, Reviews & Approvals, Site Updates, Inspections, Tasks), Finance (Finance overview, Inflows, Disbursements, Budgets & fees), and People (Philip, Language, Dark mode, Log out). The main content area displays a list of clients with the following details:

Client Name	Email	Joined	Last Seen	Projects	Conversations	Open tickets
Ada Mbala	a.mbala@example.cm	joined 25 days ago	last seen 2 days ago	1	0	1
Mbala Residence — Bonapriso Stage 5 of 10 · Jalla Verify · Active · Douala, CM						
Marie Fotso	marie.fotso@example.cm	joined 2 months ago	never signed in	1	0	0
Fotso Duplex — Bonamoussadi Stage 7 of 10 · Jalla Management · Active · Douala, CM						
Jean Nkeng	jean.nkeng@btp-nkeng.cm	joined 23 days ago	last seen 2 days ago	0	0	0
No project yet — this account has signed up but not started a build.						

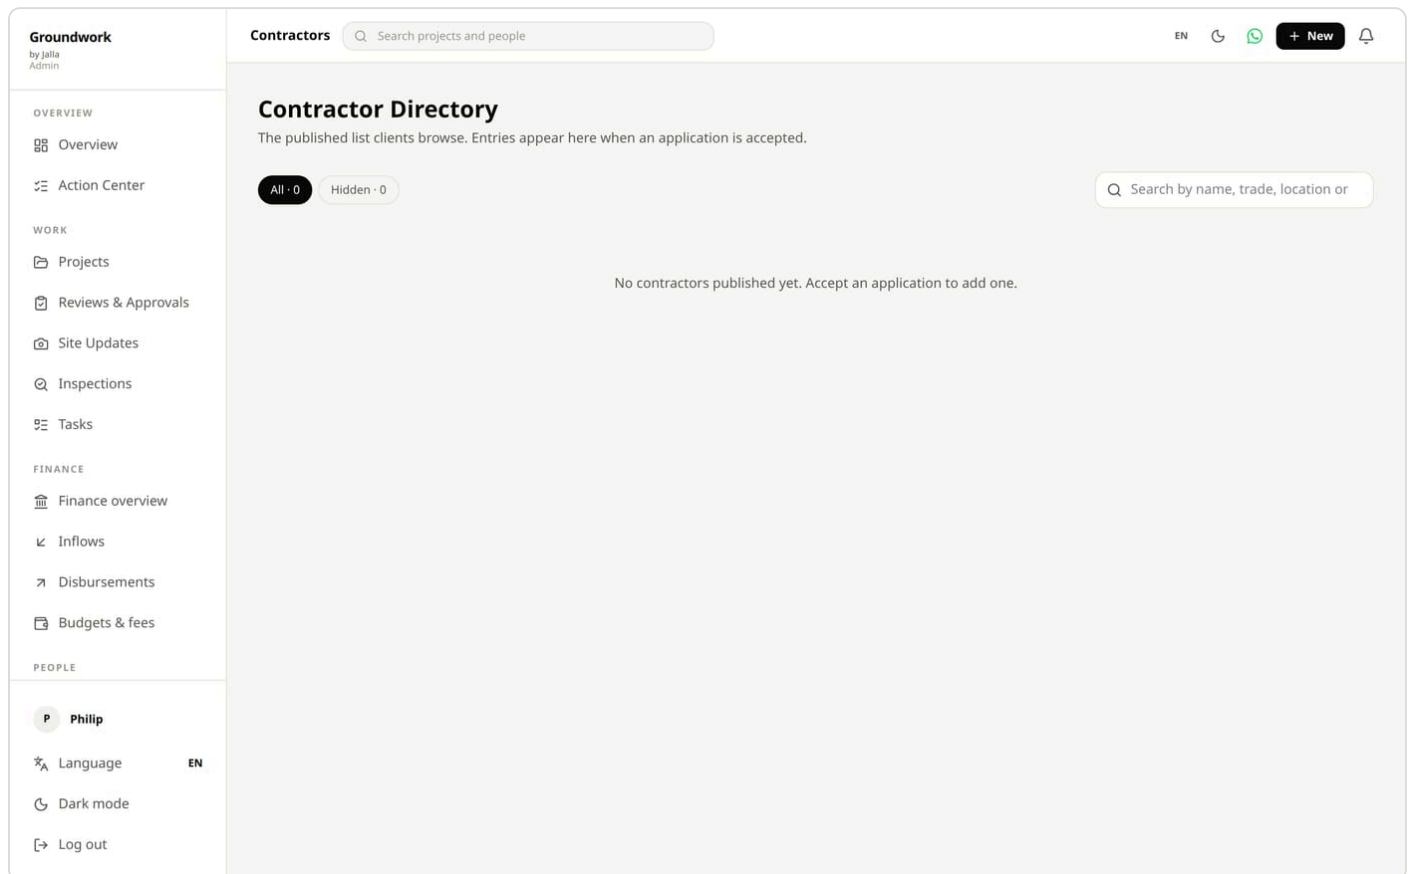

A “Building now” count at the top separates active clients from registered ones.

14 Contractors

GO TO www.tryjalla.com/admin/contractors

The **published directory clients browse** — not everyone who applied. Entries appear here when an application is accepted, which is the single route in. Tabs for All and Hidden; hiding an entry keeps its history and is reversible, deleting is not.

An empty directory says “*No contractors published yet. Accept an application to add one.*” — which tells you the fix rather than just the fact.

Applications live under Acquisition; this page is the published result.

15 Verifiers

GO TO www.tryjalla.com/admin/verifiers

Who can verify, in what discipline, and what they are carrying now. Each person shows their profile — disciplines, registration body and number where recorded — plus **Projects**, **Pending** and **Decided** counts and when they last decided something.

Someone holding the role without a profile is shown as “*No verifier profile yet — they hold the role but have recorded no disciplines.*” Assignment happens from a project workspace, and the page says so.

“Plan” is the tier of their most recent project, so it is blank for someone with none.

Talking to people, and who is asking

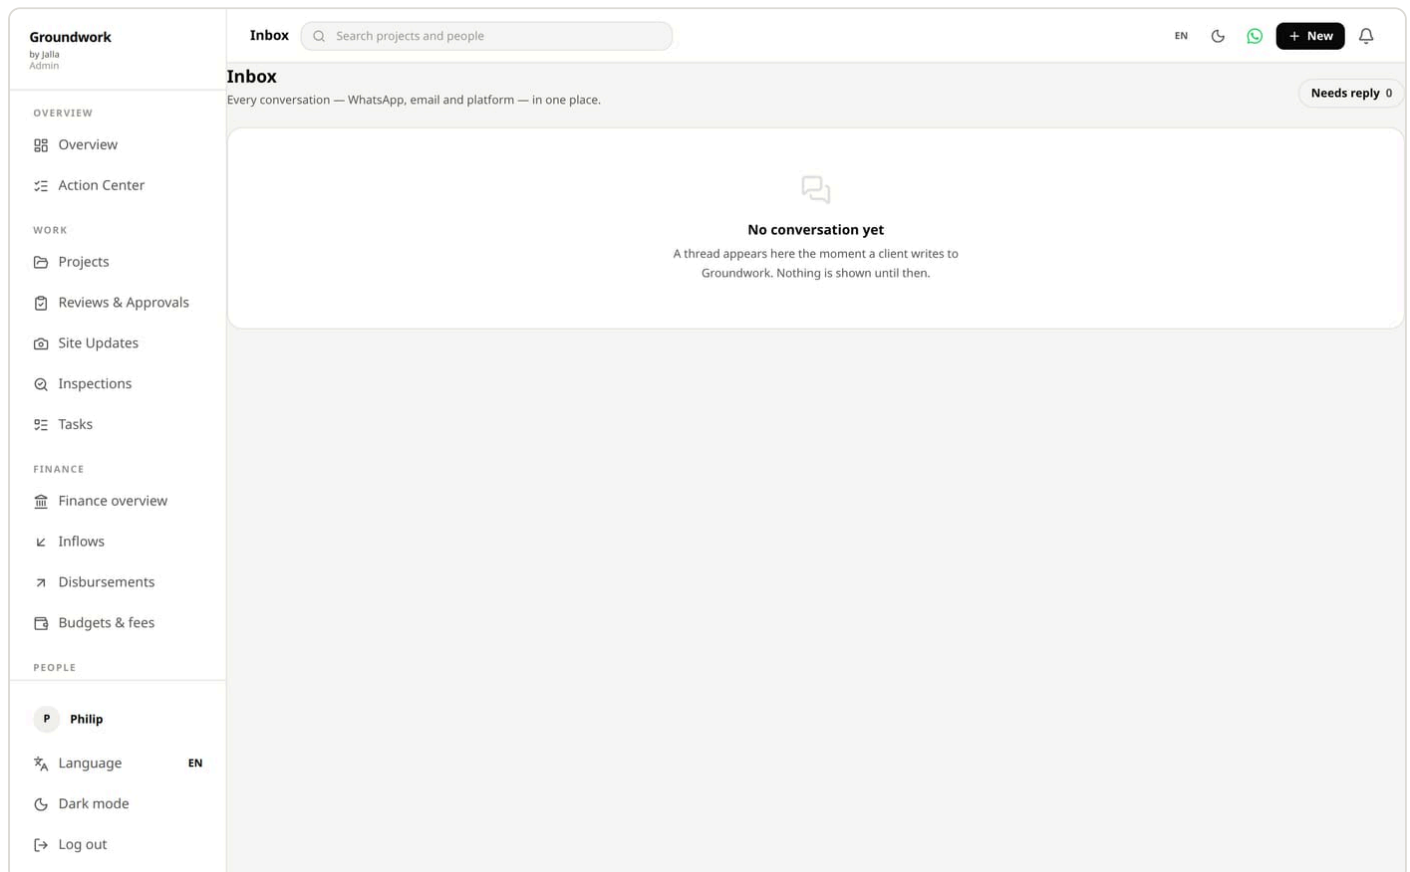

17 Inbox

GO TO www.tryjalla.com/admin/inbox

Every conversation — **WhatsApp, email and platform messages** — in one place, with a **Needs reply** count that is the same number the Overview shows. The sidebar's WhatsApp, Jalla Messages, Email and Calls entries are all filtered views of this one page, not separate inboxes.

WhatsApp is live in production and round-trips: a client's message arrives here, and your reply reaches their phone. A thread can be linked to a project so the conversation sits with the build it concerns.

With nothing yet it says *“A thread appears here the moment a client writes to Groundwork. Nothing is shown until then.”*

One inbox, filtered by channel — not four separate ones.

18 Contractor Applications

GO TO www.tryjalla.com/admin/applications

Founding-network applications, filtered by status — All, Pending, Reviewing, Accepted, Rejected, Disqualified. A banner flags anyone who was never told their

application arrived, so the backlog is visible rather than remembered.

Open one to see the full submission: contact details, trade, experience, credentials and uploaded documents (through signed links), project history with client references, and the standards they accepted. From there you can set status, send the decision email, re-send the acknowledgement, push to the CRM, and **edit** the application — corrections are stamped with who made them and when.

Accepting publishes them to the public contractor directory. That is the only route in.

Each project's own slice of this is the Activity tab in its workspace.

21 Pages not built yet

Four menu items open an honest placeholder: **Inspections**, **Tasks**, **Site Managers** and **Agents**. The page says the section is part of the admin but its page is not built, and promises that when it ships everything on it will come from real data.

These are not bugs. They are in the menu because the information architecture is settled even though the pages are not, and a dead link would be worse than an honest one.

Also present and real, but not given their own entry in this guide: **Started applications** (abandoned drafts), **Waitlist**, **Quote requests**, **CRM** (GoHighLevel sync state and backlog), **Notifications**, **Analytics**, **Integrations**, **Automation requests**, **Team & permissions** and **Settings**.

What an unbuilt section looks like. If you see invented rows anywhere, that is a bug worth reporting.

Two things that look like faults and are not

22 What admin deliberately cannot do

Some absences are designed. Groundwork's value is that the record is trustworthy, and that requires staff to be limited in specific ways:

YOU CANNOT	BECAUSE
Record a verification	Only the assigned verifier does that. You approve the stage afterwards; the finding is theirs.
Edit the audit log	The database writes it. A record staff can edit proves nothing.
Hold or move client money	Groundwork records and authorises; a licensed provider holds and moves it.
Submit site evidence as a contractor	Evidence is filed by the person who did the work; a verifier is explicitly refused too.
Enter <code>/work</code> or <code>/verifiers</code>	Being an admin is not being a contractor or verifier. Manage them from the People pages instead.
Issue a certificate on Self Verify	Certificates require independent verification. Self Verify has none by definition.

23 Empty, zero and unavailable are three different things

The admin is careful to distinguish them, and the difference is usually the answer to “is this broken?”

YOU SEE	IT MEANS
0	A real count that is genuinely zero. Nothing is wrong.
An empty state with a sentence	Read fine, there is nothing there — usually with the reason, e.g. “Accept an application to add one.”
“Not available” or a dash	The source could not be read. This one <i>is</i> worth reporting.
“Nothing recorded yet”	The project exists but has no entries of this kind — different from a zero balance.

If you see a row you cannot explain, that is the bug

The admin shows only real Supabase and GoHighLevel data. There are no sample projects, placeholder figures or demo threads anywhere in it. So a project you do not recognise, a number that cannot be sourced, or a person who does not exist is worth reporting immediately — the rule is that it should be impossible.

— Every address in this guide

ADDRESS	PAGE
/admin/login	Staff sign-in
/admin	Overview
/admin/action-center	Everything waiting on the desk
/admin/projects	Every project
/admin/projects/<id>	One project's workspace
/admin/reviews	Stages awaiting approval
/admin/site-updates	What site has reported
/admin/finance	The ledger
/admin/finance/inflows	Money in, by stage
/admin/finance/disbursements	Money out, by work
/admin/budgets	Budgets and financial operations
/admin/clients	Who we build for
/admin/contractors	Published directory
/admin/verifiers	Who can verify
/admin/users	Every account
/admin/inbox	All conversations
/admin/applications	Contractor applications
/admin/support	Support tickets
/admin/audit-log	The permanent record

All addresses are relative to www.tryjalla.com.
