

Setting up a client, end to end

Creating the client's account, handing over their sign-in, and building their project for them — every screen, in order, with the address to type.

FOR	APPLIES TO	SITE	PREPARED
Anyone with a Jalla admin account	Jalla Management clients	www.tryjalla.com	22 September 2026

PART 1 — THE ACCOUNT

1. Sign in to the admin area
2. Open the client list
3. Fill in what you collected
4. Hand over the two credentials

PART 2 — THE PROJECT

5. Start a project for that client
6. Choose whose project it is
7. Work through the build questions
8. Confirm the budget and attach the BoQ

PART 3 — THEIR SIDE

9. What the client does on first sign-in
10. If something goes wrong

Before you start

You need two things: **an admin account on Groundwork**, and **the client's details already collected** — their full name, an email address they can actually open, and ideally a phone number. The email matters more than anything else on the form: it becomes their username, and a code is sent to it the first time they sign in. An address they cannot open is an account they cannot enter.

The order matters

The account comes first, the project second. A project has to belong to somebody, so there is nothing to attach a build to until the client exists. If you are already on the project screen and the client is not in the list, there is a link there that takes you back to create them — Step 6 covers it.

Creating the client's account

Roughly two minutes. It ends with a username and a password written on your screen, which you read out or send to the client.

01 Sign in to the admin area

GO TO www.tryjalla.com/admin/login

This is a separate door from the one clients use. There is no “sign up” here and no Google button — deliberately: an admin account is only ever created by another admin.

Sign in with your own email and password. If two-factor authentication is switched on for your account, you will be asked for a code before you get in. You land on the **Overview** page, with the full admin menu down the left.

The screenshot shows the 'Admin sign in' page for Groundwork by Jalla. The page has a dark background. At the top left, the logo 'Groundwork by Jalla' is visible. At the top right, 'EN' is displayed. In the center, there is a section titled 'STAFF ACCESS' with a lock icon, followed by 'Admin sign in' in a large font. Below this, a message states: 'This area is restricted to Groundwork staff. Sign in with your admin account.' There are two input fields: 'Email' and 'Password'. To the right of the password field is a link that says 'Forgot password?'. Below the input fields is a white 'Sign in' button. At the bottom, there is a link that says '← Back to Groundwork'.

The admin door. If you see the ordinary client login instead, check the address — it must end in `/admin/login`.

02 Open the client list

GO TO www.tryjalla.com/admin/users

In the left-hand menu, under **People**, click **Users**. This is everyone who has an account on Groundwork — clients, contractors and staff alike.

Before creating anyone, **search for them first**. The search box takes a name or an email address. If they are already here, do not create a second account; open the existing one. Creating a duplicate splits their projects across two logins and neither one shows the whole picture.

When you are sure they are new, click **Create a client account**, top right.

The screenshot shows the 'All Users' page in the Groundwork admin interface. The page has a sidebar on the left with navigation options: Overview, Action Center, Projects, Reviews & Approvals, Budgets, Site Updates, Inspections, Tasks, Clients, Contractors, and Site Managers. The main content area is titled 'All Users' and shows '3 registered' users. There is a search bar for users and a 'Create a client account' button. A section titled 'Send everyone to the CRM' provides instructions on how to use the CRM feature. Below this is a table of users.

NAME	EMAIL	ROLE	PLAN	PROJECTS	JOINED	
Ada Mbala	ada.mbala@example.cm	CLIENT	Jalla Management	1	10 Sept 2026	u-ada...
Jean Nkeng Awaiting first sign-in	jean.nkeng@example.cm	CLIENT	—	0	18 Sept 2026	u-jean...
Jalla Admin	admin@tryjalla.com	ADMIN	—	0	1 Jan 2026	u-admin...

The Users list. The **Awaiting first sign-in** mark under a name means that person was set up by an admin and has not yet used the password they were given — see Step 10.

03 Fill in what you collected

YOU ARE ON www.tryjalla.com/admin/users/new

FIELD	WHAT TO ENTER
Full name	As they would write it themselves. It appears on their dashboard and on anything Groundwork sends them.
Email address	Their username, and where the sign-in code goes. Check it twice — a typo here means an account nobody can enter.
Phone	Optional. Useful for reaching them; not used to sign in.
Country	Cameroon unless you know otherwise.
Language for emails	English or French. Everything Groundwork sends them follows this. They can change it later themselves.

Click **Create account**. Nothing is emailed to the client — you hand the details over yourself.

The screenshot shows the 'Users' management page in the Groundwork by Jalla Admin interface. The left sidebar contains navigation links for Overview, Action Center, Projects, Reviews & Approvals, Budgets, Site Updates, Inspections, Tasks, Clients, Contractors, and Site Managers. The main content area is titled 'Create an account for a client' and includes a search bar, a back link, and a form with the following fields: Full name, Email address (with a note that it's their username and where a sign-in code goes), Phone (optional), Country (set to Cameroon), and Language for emails (English or Français). A 'Create account' button is at the bottom, with a note stating 'No email is sent. You hand over the details yourself.'

Five fields. The note under the email field is the one to read twice.

04 Hand over the two credentials

The screen changes to show two things, with a copy button beside each:

- **Username** — the email address you just entered.

- **Temporary password** — generated for you, in the shape Kf7m-Rq3x-Wn9p-Ht4y. Deliberately made of characters that survive being read aloud: no zero against letter O, no one against letter l.

This password is shown once and is stored nowhere

Leave the page and it is gone for good — not recoverable by you, by Favour, or from any record. Copy it out *now*: read it to the client on a call, or put it in a message you delete afterwards.

If it is lost anyway, **do not create a second account**. Send the client to www.tryjalla.com/auth/reset-password and have them use **Forgot password?** — that works, because the email address is already confirmed.

The screenshot shows the 'Groundwork by Jalla Admin' interface. The left sidebar contains navigation links for Overview, Action Center, Work (Projects, Reviews & Approvals, Budgets, Site Updates, Inspections), Tasks, and People (Clients, Contractors, Site Managers). The main content area is titled 'Users' and shows a search bar. Below the search bar, there's a 'Back to users' link and a shield icon. The main heading is 'Account created for Jean Nkeng'. Below this, it says 'Give them these two things. Read them out, or copy them into a message you will delete afterwards.' There are two input fields: 'USERNAME (EMAIL)' with the value 'jean.nkeng@example.cm' and a 'Copy' button, and 'TEMPORARY PASSWORD' with the value 'Kf7m-Rq3x-Wn9p-Ht4y' and a 'Copy' button. Below these fields, a warning message states: 'This password is shown once and is not stored anywhere. If it is lost, do not create another account — they can use "Forgot password?" on the sign-in page, which works because the email is already confirmed.' Below this, a section titled 'What happens at their first sign-in' lists three steps: 1. They sign in at Groundwork with the username and temporary password above. 2. A six-digit code is sent to their email. Entering it proves the inbox is theirs. 3. They are asked to choose a password of their own before seeing anything else. The temporary one stops working at that moment. At the bottom, there are two buttons: 'Create their project' and 'Create another account'.

The handover screen. **Create their project**, at the bottom, carries the client straight into Part 2 with them already selected — the quickest route if you are doing both in one sitting.

Creating the project for them

Ten screens of build questions, then the budget. The project belongs to the client from the moment it is created — it appears on their dashboard, not yours — and Groundwork records that you set it up.

05 Start a project for that client

GO TO www.tryjalla.com/admin/projects

In the left menu, under **Work**, click **Projects**, then **Create for a client**, top right.

If you came straight from the handover screen in Step 4, you have skipped this — you are already at the next step with the client chosen.

The screenshot shows the Groundwork by Jalla Admin interface. On the left, the sidebar has a 'WORK' section with 'Projects' highlighted. The main content area is titled 'All Projects' and shows a table with one project. The table has columns: PROJECT, OWNER, TIER, STATUS, STAGE, and CREATED. The project listed is 'Mbala Residence, Bonapriso' owned by 'Ada Mbala' under 'Jalla Management', with a status of 'ACTIVE', stage of '2 / 10', and created on '10 Sept 2026'. A '+ Create for a client' button is visible in the top right of the main area.

PROJECT	OWNER	TIER	STATUS	STAGE	CREATED
Mbala Residence, Bonapriso	Ada Mbala	Jalla Management	ACTIVE	2 / 10	10 Sept 2026

Every project on Groundwork, whoever owns it. The button that starts a new one sits top right.

06 Choose whose project it is

YOU ARE ON www.tryjalla.com/admin/projects/new

Search by name or email, then click the client. Staff accounts are left out of this list on purpose — you are picking the person who will own the build.

If they are not there, they have no account yet. The line at the bottom — **“Client not on Groundwork yet? Create their account first”** — takes you back to Part 1, and returns you here with them already selected.

Going straight to one client

Each client has a direct address: `www.tryjalla.com/admin/projects/new?for=<client id>`. That is exactly what the **Create their project** button uses. You never have to construct it by hand, but if you have that link it skips the search.

Choosing the owner. The count under each name tells you whether they already have a build running.

07 Work through the build questions

This is the same questionnaire a client would fill in themselves, with one difference you can see at the top of every screen: an amber line reading **Creating for [name] • Jalla Management**. As long as that line is there, everything you type is being recorded against *their* project, not yours.

The counter top right reads **1 / 11** through **11 / 11**. The plan-choice screen (number 10) is skipped automatically — an admin-created project is Jalla Management by definition, so there is nothing to choose.

SCREEN	WHAT IT ASKS
1 • Location	Country. Cameroon is offered first.
2 • Project Type	What kind of build this is.
3 • Building	The building type.
4 • Floors	Ground floor only, or how many storeys above it.
5 • Rooms	Room composition, one floor at a time . You must put at least one room on each floor before it will let you move to the next — this is what stops an upper floor being left empty by accident and under-pricing the build.
6 • Quarters	Whether there is a boys' quarters.
7 • Roof	Roof type.
8 • Details	Project name, ground-floor footprint in m ² , and the city. The city matters: rates differ by location and the estimate is adjusted for it.
9 • Summary	Everything so far, with the estimated budget and predicted build timeline. Read this back before continuing.
11 • Confirm	The budget. Covered in the next step.

Back and **Continue** move between screens, and the numbered dots at the top jump to any screen you have already completed. Nothing is saved to the client's account until the last step, so leaving half-way loses the answers — but creates nothing wrong.

Screen 1 of 11. The amber line is the thing to keep an eye on — if it is missing, you are creating a project for yourself rather than for the client.

08 Confirm the budget and attach the BoQ

The last screen shows Groundwork's own estimate and a field holding the same figure, labelled **Your final budget**. **Overwrite it with the real contract figure whenever you have one**. Every stage payment is derived from whatever number is in that field, so it should be the number the build is actually being run on, not the estimate.

Underneath is **Upload your contractor's quote or bill of quantities** — an Excel BoQ is exactly what it is for. It accepts **PDF, Word, Excel (.xls / .xlsx), CSV, OpenDocument spreadsheets and images**, up to 20 MB, and files it into that project's **Documents** tab under **Bill of Quantities**, stored privately — never on a public link.

Click **Confirm budget & create project**. The project is created, its first stage opens, and you are returned to `/admin/projects`, where it now appears.

If the file is refused

You are told immediately, before the project is created, and nothing else is lost — pick a different file and carry on. If the build is created but the attachment fails at the last moment, the project page says so and the file can be added afterwards from the project's **Documents** tab.

PART THREE

What happens on the client's side

Worth knowing, because they will ring you about it.

09 Their first sign-in

SEND THEM TO www.tryjalla.com/auth/login

Three things happen, in this order:

1. They sign in with the **email and temporary password** you gave them.
2. A **six-digit code is emailed** to that address. Entering it proves the inbox is theirs.
This is why the email address had to be one they can open.
3. They are asked to **choose a password of their own** before they can see anything else. The temporary password stops working at that moment — so the one you knew is no longer a way into their account.

After that they land on their dashboard, with the project you built already there.

Step three, as the client sees it. Until this is done, they cannot reach the rest of the product.

The client's door — `/auth/login`, not `/admin/login`. Sending them to the admin page is the commonest mix-up.

10 If something goes wrong

WHAT YOU HEAR

WHAT TO DO

"I've lost the password you gave me"	Send them to <code>/auth/reset-password</code> and have them use Forgot password? . Do not create a second account.
"No code arrived"	Have them check spam first. There is a resend link on the code screen. If it still does not arrive, the address is probably wrong — check it on <code>/admin/users</code> .
"That email already exists"	Someone already has an account on it. Find them on <code>/admin/users</code> and use that account. Groundwork refuses to issue a fresh password for an address somebody already owns.
They never signed in	<code>/admin/users</code> shows Awaiting first sign-in under their name for exactly this. It clears itself the moment they choose their own password.
Wrong name or email on the account	The client can change both themselves under Settings → Account . An email change is confirmed by link before it takes effect.
The budget figure was wrong	It can be revised afterwards from the project's Costing tab. Stage payments recalculate from the new figure.

— Every address in this guide

ADDRESS	WHAT IT IS
/admin/login	Staff sign-in
/admin/users	Everyone with an account; search here first
/admin/users/new	Create a client's account
/admin/projects	Every project on Groundwork
/admin/projects/new	Create a project for a client
/admin/projects/new?for=<id>	The same, with one client pre-selected
/auth/login	The client's sign-in
/auth/reset-password	Forgot password, for clients

All addresses are relative to www.tryjalla.com.
